

VALERIO

Lolium perenne

Profile

VALERIO is an interesting combination of good yield and remarkable persistence. The tetraploid, late perennial ryegrass with an "M", showing a special suitability for peat soils in the grassland areas, like North Germany. It achieves great total dry matter yields, in particular in the first cut (relative 109 in the North German region).

National listing/Official recommendation:

BE, DK, DE, RU, UK

- ✓ highest DM yields, esp. in the first cut
- ✓ widely recommended top variety
- ✓ healthy, persistent and suitable for peat soils

Suitability

Ploidy	tetraploid
Maturity	late
Peat-soil suitability	✓

Yield characteristics

Dry matter yield total		medium to high
Dry matter yield - 1st cut		high to very high
Dry matter yield - further cuts		medium

Plant stand development

Early growth development		medium to strong
Susceptibility to winter damage		low to medium
Tendency to lodging		medium to strong
Persistence		high
Sward density		medium

Healthiness

Susceptibility to rust		low to medium
------------------------	--	---------------

Quality

Inflorescence formation in aftermath		low to medium
--------------------------------------	--	---------------

Classification according to the descriptive variety list - Bundessortenamt (federal plant variety office, Germany) 2022 and our own results.

All specified informations, recommendations and representations mentioned here are made to the best of our knowledge and belief, but without guarantee of completeness or accuracy. We cannot guarantee that the properties described are repeatable. All information is provided as an aid to decision-making. Deutsche Saatveredelung AG excludes adhesion for damage or claims for damages, resulting of the use for the variety specified in this description. Mixture compositions may change if individual varieties are not available. As of 10/2022. Subject to change without notice.
