

Profile

SHERLOCK is a tetraploid late Perennial ryegrass. The variety provides high stable yields while being highly persistent and soil-covering, even on difficult locations such as peat soils. A very good rust resistance and the outstanding low tendency to form inflorescences in the aftermath, ensures perfect forage quality. The Belgian recommendation "Fourrages Mieux" rated SHERLOCK 109% overall with especially good values for vigor and grazing suitability.

National listing/Official recommendation:

BE, CA, DE

Sowing rate: 40 kg/ha

- √ high and well-balanced yields
- ✓ very low tendency to form inflorescences in the aftermath

tetraploid

✓ peat soil suitability

Suitability

Ploidy

cuts

Maturity	late to very late	late to very late		
Peat-soil suitability	✓			
Yield characteristics				
Dry matter yield total		6	medium to high	
Dry matter yield - 1st cut		6	medium to high	
Dry matter yield - further		5	medium	

Plant stand development

Early growth development	5	medium
Susceptibility to winter damage	4	low to medium
Tendency to lodging	6	medium to strong
Persistence	6	medium to high
Sward density	5	medium
Healthiness		
Susceptibility to rust	4	low to medium
Quality		
Inflorescence formation in aftermath	2	very low to low
