

JOY

ca. S 150 | ca. K 160

Ultra-early and packed with starch

Profile

JOY is one of a new generation of ultra early maize. Based on a strong flint genetic, these hybrids are really fast in vegetation, flowering and cob filling. They have a very high content of starch, and because of that a strong forage quality. DSV ultraearly maize varieties have an outstanding youth development, also in cold areas.

- Above average starch content
- Very good tolerance to cold weather conditions at juvenile stage
- Wide leaves for high forage quality

General

Usage	
Silo maturity	ultra early
Grain maturity	ultra early
Maturity forage	ca. 150
Maturity grain	ca. 160
Type of grain	flint
Hybrid	Double-hybride
Sowing date	early | late

Breeder classification: +++ = very good / very high | ++ = good / high | + = medium

Resistance to diseases

Maize smut	++
Helminthosporium	+

Location

Limited areas	✓
Soil type	heavy | light
Humidity	wet | dry

Sowing

Forage	10 - 12 Plants/m²
