

## JOY

CA. S 150 | CA. K 160

Ultra-early and packed with starch

### Profile

JOY is one of a new generation of ultra early maize. Based on a strong flint genetic, these hybrids are really fast in vegetation, flowering and cob filling. They have a very high content of starch, and because of that a strong forage quality. DSV ultraearly maize varieties have an outstanding youth development, also in cold areas.

- ✓ Above average starch content
- ✓ Very good tolerance to cold weather conditions at juvenile stage
- ✓ Wide leaves for high forage quality

## General

Usage	 
Silo maturity	ultra early
Grain maturity	ultra early
Maturity forage	ca. 150
Maturity grain	ca. 160
Type of grain	flint
Hybrid	Double-hybride
Sowing date	

Breeder classification: +++ = very good / very high | ++ = good / high | + = medium

## Resistance to diseases

Maize smut	<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/>
Helminthosporium	<input checked="" type="radio"/> <input type="radio"/> <input type="radio"/>

## Location

Limited areas	
Soil type	
Humidity	

## Sowing

Forage	10 - 12 Plants/m <sup>2</sup>
