Medium to late with clover

High yielding mixture for cutting and grazing

Profile

English ryegrass with intermediate and late maturity as well as White clover provide high use elasticities and energy densities. The White clover additionally fixes atmospheric nitrogen and increases the protein content of the forage. The mixture is universally usable for reseeding, new sowings, field forage or undersowing.

The white clover seeds are treated with DSV's DynaSeed LegumeMaxx, which contains among others species-specific bacteria. [DynaSeed LegumeMaxx](#) demonstrably and significantly improves nitrogen fixation, root development, and thus yield.

- ✓ High energy density
- ✓ Flexible in use
- ✓ Universally usable
- ✓ White clover for N-fixation

Components

50%	Lolium perenne (intermediate) Euroconquest , Explosion
40%	Lolium perenne (late) Sherlock , Valerio
10%	Trifolium repens Bianca , Liflex
