Protein

High yielding, protein-optimized quality mixture with clover

Profile

In this mixture high percentages of intermediate and late English ryegrass are combined with high shares of Red and White clover, which ensures top forage quality and safe ensiling. The high clover content provides high protein yields as well as N-fixation. The mixture is suitable for reseeded, new sowings and field forage.

The legumes are treated with DSV's DynaSeed LegumeMaxx, which contains among others species-specific bacteria. [DynaSeed LegumeMaxx](#) demonstrably and significantly improves nitrogen fixation, root development, and thus yield.

- ✓ High protein content
- ✓ Red and White clover for N-fixation
- ✓ Our recommendation for clover-reseeding
- ✓ High energy density

Components

40%	Lolium perenne (intermediate) Euroconquest , Explosion
35%	Lolium perenne (late) Hurricane , Valerio
20%	Trifolium pratense Harmonie , Milvus
5%	Trifolium repens Bianca , Liflex

If individual varieties are not available, they are replaced by equivalent ones.

Sowing pattern

New sowing, Overseeding

Locations

Dry

Normal

Wet

Peat Soil

Altitude

Usage

Grazing

Grazing and cutting

Cutting

+++ = highly suitable | ++ = suitable | + = conditionally suitable | - = not given

Cultivation notes

New sowing	35 - 40 kg/ha	
Overseeding	15 - 20 kg/ha	
Overseeding, several times per year	7 - 10 kg/ha	
Usage per year	4 - 5	
Usage	Recommendation for clover resowing, Dynaseed
