

TERRALIFE® - CEREALPRO

Undersowing mixture for cereas

Profile

CerealPro brings biodiversity to cereal stands. The balanced mixture ratio prevents competition with the main crop and promotes the development of a diverse root system. The additional ground cover between the rows of the main crop helps to prevent erosion and suppress weeds. After the cereal harvest, the undersown crop can be converted into a cover crop. Species such as crimson clover and ribwort plantain form a winter hardy ground cover.

- Species-rich mixture composition
- Use of nutrient-efficient species
- Partly winter hardy

Components

41.4%	Legumes
3.1%	Cruciferous
	Lolium perenne, Trifolium repens, Lotus corniculatus, Falseflax, Phacelia, Plantago lanceolata, Crimson clover, Linseed

Seed shares (%)

Sowing pattern

blank seed, mulch sowing, direct sowing, drone, spreader device on tillage implement

Crop rotations

Cereals

Cultivation notes

Sowing time	from middle of February to beginning of April
Usage	co-seeding, undersowing mix for cereals, normal sowing time, medium to low proportion of legumes
