

# ARNANDO

Lolium perenne

## Profile

ARNANDO is a diploid variety in the late maturity segment. The variety shows a good rust resistance combined with interesting yields over all cuts, especially in the first cut (Northwest German recommendation). Remarkable for ARNANDO is also its low tendency for inflorescence formation in the aftermath. The combination of high yields and a low stem production in the following cuts leads to excellent high energy yields, when ARNANDO is grown.

**Sowing rate:** 40 kg/ha

**International listings/recommendations:** DE, DK, NL

- ✔ great endurance, low susceptibility to rust
- ✔ high yields, esp. in first cut
- ✔ good sward density and leafy growth

## Suitability

Ploidy	diploid
Maturity	late

## Yield characteristics

Dry matter yield total	(1) (2) (3) (4) (5) (6) (7) (8) (9)	medium to high
Dry matter yield - 1st cut	(1) (2) (3) (4) (5) (6) (7) (8) (9)	medium to high
Dry matter yield - further cuts	(1) (2) (3) (4) (5) (6) (7) (8) (9)	medium

## Plant stand development
