

TRIDENT

Oil radish

Three times excellent against nematodes

Profile

TRIDENT is a special oil radish variety that is resistant to three species of nematode: Heterodera schachtii, Meloidogyne chitwoodi and Meloidogyne hapla. TRIDENT is therefore a good choice for nematode control in intensive crop rotations involving sugar beet, potatoes and vegetables. The variety develops rapidly in the early stages, which helps to suppress weeds. A deep root system and a lower tendency to flower are further advantages of TRIDENT.

- Resistances: Heterodera schachtii, Meloidogyne chitwoodi and hapla
- Nematode control in intensive crop rotations with sugar beets, potatoes and vegetables
- Safe early growth for good weed suppression

Agronomic properties

Early growth development	1 2 3 4 5 **6** 7 8 9	medium to strong

Tends to

Flowering	1 2 **3** 4 5 6 7 8 9	low
Lodging	1 **2** 3 4 5 6 7 8 9	very low to low

Vulnerabilities

Beet cyst nematodes	1 **2** 3 4 5 6 7 8 9	very low to low

Classification according to the descriptive variety list - Bundessortenamt (federal plant variety office, Germany) 2025 and our own results.

Special characteristics

Multi-resistance

Sowing

25 - 30 kg/ha

Sowing date

Mid of July to end of August

Usage

Green manure
