

ETHAN

Lolium perenne

The high-performance athlete!

Profile

ETHAN is a variety with a particularly high stem density, resulting in good scar formation. ETHAN thus guarantees fine, dense turf.

Its widespread recommendation across Europe is testament to its high level of climate adaptability and flexibility.
It also receives high ratings for both sports and ornamental turf. Regrowth capacity is an important factor for sports turf. ETHAN performs particularly well in this regard,
making it a highly versatile variety that can be used in a wide range of mixtures where turf regrowth after heavy use is important.

Excellent resistance, particularly to rot, and extremely high appearance ratings in both summer and winter during wear-tolerance testing ensure that this variety always looks its best.

- High shoot density
- Guarantee for good scar density
- Universally applicable

STRI S1 - Sport uses

Mean	7
Visual merit	7

STRI L1 - Lawns, Landscaping

Visual merit	7
Shoot density	7.1
Fineness of leaf	6.9
