

POLE POSITION

MUSTARD

Highest nematode resistance

Profile

POLE POSITION shows the highest resistance to beet cyst nematodes (*Heterodera schachtii*, Cat. 1) and has only a slight tendency to flower. Combined with its very low to low lodging tendency and medium-high biomass production, POLE POSITION is a particularly interesting variety for intercropping.

- Tolerates late sowing
- Offers much organic matter
- Short, stable growth type

Agronomic properties

Early growth development
