

TRIPLEX

Festuca rubra trichophylla

Adaptable

Profile

TRIPLEX is our newest variety in the red fescue range of slender creepers. In terms of colour, the variety can be found in the medium green to slightly dark green range. In addition to a comparatively fast establishment, it is characterised by a good summer aspect and a good adaptability to maritime and temperate climates.

This variety is characterised by its moderate turf quality combined with excellent visual properties. Triplex is particularly suitable for use in home gardens and extensive areas - landscaping and parks.

Two outstanding features of TRIPLEX:

Adaptability: Triplex adapts well to different soil and climatic conditions. This variety is suitable for both sunny and semi-shady locations. Its adaptability makes Triplex a reliable choice for Northern and Central Europe.

Low maintenance: The Triplex variety is low maintenance and requires minimal attention. Regular mowing and occasional fertilisation are sufficient to ensure a healthy and attractive lawn.

Overall, TRIPLEX is a first choice for landscapers, home garden owners and anyone who is looking for a good alternative within the slender creeping red fescues.

- Outstanding adaptability on maritime and temperate climates
- Fast establishment under optimal conditions
