

TERRALIFE® - N-FIXX

Rapid soil coverage and nitrogen fixation

Profile

TerraLife® N-Fixx is a perfectly balanced allround mix. It contains more than 70 % legumes and is therefore an ideal mixture to raise the soil nitrogen content. It is excellent for winter grain crop rotations and freezes off reliably. Therefore, it can also be established before the cultivation of sugarbeets or oilseed rape. Furthermore, TerraLife® N-Fixx leaves very good soil tilth, creates humus and contributes to the health and vitalisation of heavily used soils. The subsequently released nitrogen must be considered during N-fertilisation of the follow-on crop.

- ✓ Freezes off very well
- ✓ Very good nitrogen accumulation
- ✓ Rich bee forage

N-Potential approx. 100 kg/ha

Components

70.8%	Legumes
0%	Cruciferous
Phacelia, Linseed, Sunflower, Niger, Sorghum, Field pea, Common vetch, Egyptian clover, Persian clover, Serradella	

Sowing pattern

blank seed, mulch sowing, direct sowing, spreader device on tillage implement, drone

Crop rotations

Oilseed rape, Cereals, Maize, Sugar beet

Cultivation notes

Sowing rate	40 - 45 kg/ha
Sowing time	from end of July to 25. August
Usage	Cover crop, winter intercrop, summer intercrop, normal sowing time, N-Potential: approx. 100 kg/ha, leguminous
