

TERRALIFE® - BETASOLA

The nematode-reducing mix for sugar beets and potato cultivation

Profile

The combination of species in BetaSola is designed to provide a broad spectrum of activity. Different varieties of oil radish help to reduce beet cyst nematodes. At the same time, multi-resistant oil radish reduces root-knot nematodes. The varying maturity levels of the radish varieties ensure a long period of effectiveness. Bristle oat also promotes the reproduction rate of root nematodes (Pratylenchus). Common vetch and Egpytian clover contribute to nitrogen fixation and a narrow C/N ratio.

- Combines soil protection and nematode reduction
- Wide action spectrum
- For biomass production and weed suppression

N-Potential approx. 60 kg/ha

Components

21.1%	Legumes
33.7%	Cruciferous
	Niger, Oil radish, Egyptian clover, Bristle oat, Common vetch

Seed shares (%)

Sowing pattern

	blank seed, mulch sowing, direct sowing, spreader device on tillage implement, drone

Crop rotations

Sugar beet, Potatoes, Cereals, Maize

Cultivation notes

Sowing rate	35 - 40 kg/ha
Sowing time	from end of July to middle of September
Usage	Cover crop, summer intercrop, winter intercrop, green fertilization, Extensive grazing, normal sowing time, N-Potential: approx. 60 kg/ha, medium to low proportion of legumes
