

TERRALIFE® - COOLSEASON

Ideal for late sowing and cool regions

Profile

The cover crop mixture CoolSeason targets late cover crop drilling periods and the use in cooler regions. It contains species that emerge and develop quickly, covering the ground and suppressing weeds even in late drilling windows. Some components are winter hardy. This preserves nutrient uptake and root growth until spring and beyond. The mixture can penetrate the soil intensively due to its deep-rooted species such as winter forage rape, radish and linseed. This helps to build soil structure and enrich the soil with organic matter. Its legume share contributes to a more narrow C/N ratio as well as nitrogen fixation. CoolSeason can also be used as wild life mixture and for grazing purposes.

- High biomass production and ground cover
- Dense rooting and winter hardy greening
- Versatile use: cover crop, fallow land greening and wild field

N-Potential approx. 30 kg/ha

Components

25.5%	Legumes
65.9%	Cruciferous
	Turnip, Persian clover, Falseflax, Crimson clover, Winter forage rape, Abyssinian cabbage, Bristle oat, Winter rye, Linseed, Deep-rooted radish, Vicia pannonica

Seed shares (%)

Sowing pattern

	blank seed, mulch sowing, direct sowing, spreader device on tillage implement, drone

Crop rotations

Cereals, Maize

Cultivation notes

Sowing rate	12.5 - 15 kg/ha	
Sowing time	from end of August to end of September	
Usage	Cover crop, green fertilization, late sowing, very late sowing, Green fallow mixture, Wild field mixture, Grazing, N-Potential: approx. 30 kg/ha, winter resistant
