

ROSPARON

Festuca arundinacea

Profile

ROSPARON stands for an excellent yield performance, which is based on fast spring growth and good sward density. The combination with a very good resistance against rust and helminthosporium makes the difference to other tall fescue varieties. Additionally softness of leaves is above average in comparison to traditional varieties.

National listing/Official recommendation:

AR, BY, BE, CA, CL, DE, FR, RU, UY

Sowing rate: 30-35 kg/ha

- ✓ variety with excellent health
- ✓ extraordinary yield performance
- ✓ rapid spring development

Yield characteristics

Dry matter yield total	<div><div>6</div></div>	medium to high
Dry matter yield - 1st cut	<div><div>5</div></div>	medium
Dry matter yield - further cuts	<div><div>7</div></div>	high

Plant stand development

Early growth development	<div><div>5</div></div>	medium
Susceptibility to winter damage	<div><div>5</div></div>	medium
Sward density	<div><div>5</div></div>	medium

Healthiness

Susceptibility to rust

low

Classification according to the descriptive variety list - Bundessortenamt (federal plant variety office, Germany) 2024 and our own results.
