

MARCO

Turnip

Grazing preference

Profile

MARCO is an early maturing tetraploid variety. Its fast establishment and ripening contributes to flexibility in drilling time. MARCO is a palatable variety due to a leaf to root ratio of 60:40. The turnip's long root system penetrates the soil and can work against compaction. It is dedicated for the use as grazing and cover crop component.

- Early maturing tetraploid variety
- Mid-summer sowing for grazing in autumn and winter
- High biomass formation

General

Ploidy	Tetraploid
Green fertilizer	✓
Grazing	✓

Sowing

2 - 3 kg/ha

Sowing date

Cover crop: July to October

Grazing: July to February

Usage

Cover crop, grazing
