

GORILLA

Winter forage rape

High yield and dry matter content

Profile

GORILLA is a dark purple green, re-growing forage rape. The stature of GORILLA is slightly shorter than many current varieties but with good standing ability. The dry matter content of GORILLA is higher than average which leads to high total dry matter yields. GORILLA shows a moderately good resistance to powdery mildew and is quite resistant to club root. With it's good regrowth potential, it can be used for both, silage-mixtures and grazing.

- The dark purple green and re-growing forage rape
- Very good standing ability and tolerant to club root
- Very good standing ability

General

Suitable for biogas	✓
Green fertilizer	✓
Usa as fodder	✓
Cutting	✓
Grazing	✓
Summer intercrop	✓
Winter intercrop	✓

Sowing

Forage use: 8-12 kg/ha,

Green manure: 12-15 kg/ha

Sowing date

Forage use: Mid-July to early September;

Green manure: Mid-August to early September

Fertilization

Forage us: 80-100 kg N/ha,

Green manure: 30-40 kg N/ha
