

VILOMENE

Sorghum

Yield and forage quality

Profile

VILOMENE is a DUAL sorghum hybrid that combines yield with good feeding properties. Due to its high panicle content, it is able to achieve very good starch contents. The variety grows to a height of about 180 cm, flowers on average 80 days after sowing and is thus assigned to the medium-early maturity group.

Recommended sowing rate: **30**- 35 grains/ m^2

- Very early maturing
- Medium tall plant
- Great forage quality
- Grain colour: brown

Usage

Silo	✓
Corn	
Dualtype	✓

Sowing

Sowing rate	30 - 35 Plants/m²
Seed distance	25 - 50 cm

Sowing date

Mid may to mid June, min. 12°C soil temperature.

Seedbed

The seedbed should be as fine-crumbled as possible (similar to beet) and a good connection to the capillary water must be ensured.

Seeding procedure

Single grain or drill seeding technique is possible. The beet technique can also be used. Particularly with drill seeding, care must be taken to ensure sufficient reconsolidation.

Sowing depth

2-4 cm
