

LIGENA

False flax

(*Camelina sativa*)

Great adaptability to different conditions

LIGENA is DSV's great Camelina variety that is both suitable for cover crop and seed production use. Due to its rapid growth and rooting habits as well as its early to medium flowering characteristics, LIGENA is especially suitable for later cover crop sowing dates. Its high-yielding performance and undemanding growth make LIGENA a favourable variety for Camelina seed production.

- ✓ Suitable for cultivation under low-input conditions
- ✓ Low susceptibility to diseases
- ✓ Good weed suppression
