

ZORRO

crimson clover

(*Trifolium incarnatum*)

Early variety for late sowing

ZORRO is an overwintering crimson clover with many uses (cover crop, fallow, forage). ZORRO is characterised by its early flowering, excellent youth development and high biomass production. Its flowers are highly attractive to bees and further beneficial insects as well as its legume-characteristics contribute to efficient nitrogen fixation.

- ✓ Excellent youth development
- ✓ Early flowering
- ✓ Medium to tall plant length

Agronomic features

Growth habit	6	Medium to semi-recumbent
Full growth height	6	Medium to long
Plant height	6	Medium to long
Branching at stem base	4	Low to medium
Beginning of flowering	4	Early to inter

General usage

- Cover crop and green manure
- Companion crop and undersown crop
- Forage – cutting and grazing

Cultivation

- Sowing rate:

25 – 30 kg/ha
- Sowing date:

Beginning of July to end of August
