

COUNTRY ENERGY 2022

Medium to late with clover

High yielding mixture for cutting and grazing

English ryegrass with intermediate and late maturity as well as White clover provide high use elasticities and energy densities. The White clover additionally fixes atmospheric nitrogen and increases the protein content of the forage. The mixture is universally usable for reseeding, new sowings, field forage or undersowing.

The white clover seeds are treated with DSV's DynaSeed LegumeMaxx, which contains among others species-specific bacteria. DynaSeed LegumeMaxx demonstrably and significantly improves nitrogen fixation, root development, and thus yield.

Components

50 %	Lolium perenne (intermediate)	Euroconquest ^{MI} , Explosion ^{MI}
40 %	Lolium perenne (late)	Sherlock, Therese
10 %	Trifolium repens	Bianca, Liflex 

- ✓ High energy density
- ✓ Flexible in use
- ✓ Universally usable
- ✓ White clover for N-fixation

Locations & Usage

Dry		Altitude	
Normal		Grazing	
Wet		Grazing and cutting	
Peat Soil		Cutting	

+++ = highly suitable | ++ = suitable | + = conditionally suitable | - = not given

Use frequency:

4 – 6 harvests per year

Sowing rate:

40 kg/ha for new sowing, 20 – 25 kg/ha for overseeding, 7 – 10 kg/ha for overseeding several times per year
