

COUNTRY ENERGY 2026

Protein

High yielding, protein-optimized quality mixture with clover

In this mixture high percentages of intermediate and late English ryegrass are combined with high shares of Red and White clover, which ensures top forage quality and safe ensiling. The high clover content provides high protein yields as well as N-fixation. The mixture is suitable for reseedling, new sowings and field forage.

The legumes are treated with DSV's DynaSeed LegumeMaxx, which contains among others species-specific bacteria. DynaSeed LegumeMaxx demonstrably and significantly improves nitrogen fixation, root development, and thus yield.

Components

45 %	Loilum perenne (intermediate)	Euroconquest  , Explosion 
40 %	Lolium perenne (late)	Hurricane, Valerio
10 %	Trifolium pratense	Harmonie, Milvus, Taifun 
5 %	Trifolium repens	Bianca, Liflex 

- ✓ High protein content
- ✓ Red and White clover for N-fixation
- ✓ Our recommendation for clover-reseeding
- ✓ High energy density

Locations & Usage

Dry		Altitude	
Normal		Grazing	
Wet		Grazing and cutting	
Peat Soil		Cutting	

+++ = highly suitable| ++ = suitable | + = conditionally suitable | - = not given

Usage per year: 4 – 6 harvests per year
Sowing rate: 35 – 40 kg/ha for new sowing, 15 – 20 kg/ha for overseeding, 7 – 10 kg/ha for overseeding several times per year
