

COUNTRY FIELD FORAGE 2051

Without clover, 1-2 years

Mixture for annual field forage growing for 1-2 years on medium to good sites

This mixture achieves high yields with intensive use, especially in the 1st cut, even before maize. In addition to the good utilisation of winter moisture, the regrowth capacity as well as the yield distribution of the further cuts is balanced. The Hybrid ryegrass makes a second main crop year possible and is responsible for high yields and stability. The mixture produces well structured grass for optimal silage produciton.

- ✓ For intensive use
- ✓ Good utilization of winter moisture
- ✓ Suitable before maize growing

Components

85 %	Welsches Weidelgras	Dolomit*, Dorike*, Lipsos*, Sendero*
15 %	Bastard Weidelgras	Astoncrusader, Ibex

Locations & Usage

Dry	+	Peat Soil	+ +
Normal	+ + +	Altitude	+ +
Wet	+ + +		

+++ = highly suitable| ++ = suitable | + = conditionally suitable | - = not given

Usage per year: 4 – 5 harvests per year
Sowing rate: 40 – 45 kg/ha for new sowing

*Suitable for use as a cover crop, as first-cut yield is above average
