

COUNTRY FIELD FORAGE 2053

Intercropping Turbo

Fast growing clovergrass mixture for intercropping purpose

The fast growing and high yielding intercropping clovergrass mixture for intensive use includes Persian clover which is responsible for a high protein content. The use of Annual ryegrass-varieties for main and intercrop forage cultivation makes the mixture flexible to use. The Persian clover seeds are treated with DSV's DynaSeed LegumeMaxx, which contains among others species-specific bacteria. DynaSeed LegumeMaxx demonstrably and significantly improves nitrogen fixation, root development, and thus yield.

- ✓ Fast growing mixture
- ✓ For intensive use
- ✓ With Persian clover

Components

80 %	Lolium westerwoldicum	Arnoldo, Falladino, Rodillo
20 %	Persian clover	Ciro, Resal 

Locations & Usage

Dry		Peat Soil	
Normal		Altitude	
Wet			

+++ = highly suitable | ++ = suitable | + = conditionally suitable | - = not given

Usage per year: 4 – 5 harvests per year
Sowing rate: 40 – 45 kg/ha for new sowing
Sowing time: from March to April, from 10. July to end of August
