

COUNTRY FIELD FORAGE 2055

Clovergrass, 2-3 years

Two to three years clovergrass mixture for medium to good sites

This clovergrass mixture has a balanced yield distribution and uniform regrowth behavior. Species were selected to harmonize in competition and persistence and to achieve a good sward density. The high red clover content ensures high protein levels.

The red clover seeds are treated with DSV's DynaSeed LegumeMaxx, which contains among others species-specific bacteria. DynaSeed LegumeMaxx demonstrably and significantly improves nitrogen fixation, root development, and thus yield.

- ✓ Balanced yield distribution
- ✓ High yielding
- ✓ High Red clover content

Components

30 %	Festuca pratensis	Baltas, Schwerta 
30 %	Trifolium pratense	Harmonie, Milvus, Taifun 
20 %	Lolium perenne (intermediate)	Astonhockey, Botond
20 %	Phleum pratense	Radde

Locations & Usage

Dry	+ +	Peat Soil	+ +
Normal	+ + +	Altitude	+ +
Wet	+ + +		

+++ = highly suitable | ++ = suitable | + = conditionally suitable | - = not given

Usage per year: 3 – 4 harvests per year
Sowing rate: 20 – 25 kg/ha for new sowing
