

COUNTRY FIELD FORAGE 2057

Alfalfa grass robust

Robust alfalfa grass for perennial field forage

Alfalfa grass with deep-rooted and robust, but soft-leaved and easily digestible tall fescue for particularly dry and rough sites.

The alfalfa seeds are treated with DSV's DynaSeed LegumeMaxx, which contains among others species-specific bacteria. DynaSeed LegumeMaxx demonstrably and significantly improves nitrogen fixation, root development, and thus yield.

- ✓ Deep rooting and soft-leaved Tall fescue
- ✓ For particularly dry and rough sites

Components

80 %	Medicago sativa	Dakota, Fleetwood, Fraver, Planet	
20 %	Festuca arundinacea	Roscati, Rosparon	

Locations & Usage

Dry		Peat Soil	
Normal		Altitude	
Wet			

+++ = highly suitable | ++ = suitable | + = conditionally suitable | - = not given

Usage per year: 3 – 4 harvests per year
Sowing rate: 20 – 25 kg/ha for new sowing
Sowing time: from April to end of August
