

COUNTRY FIELD FORAGE 2061

Alfalfa grass, very dry

Persistent alfalfa mixture for very dry sites

Alfalfa grass mixture with drought-tolerant cocksfoot, providing high yields even on inhomogeneous sites. Both species can cope with very dry conditions and cocksfoot is best suited to give structure.

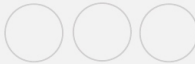

The alfalfa seeds are treated with DSV's DynaSeed LegumeMaxx, which contains among others species-specific bacteria. DynaSeed LegumeMaxx demonstrably and significantly improves nitrogen fixation, root development, and thus yield.

Components

90 %	Medicago sativa	Dakota, Fleetwood, Fraver, Planet	
10 %	Dactylis glomerata	Rosseur	

- ✓ Drought-tolerant and structure-rich cocksfoot
- ✓ N-fixing and protein-rich

Locations & Usage

Dry		Peat Soil	
Normal		Altitude	
Wet			

+++ = highly suitable | ++ = suitable | + = conditionally suitable | - = not given

Usage per year: 3 – 4 harvests per year
Sowing rate: 20 – 25 kg/ha for new sowing
Sowing time: from April to end of August
