

COUNTRY ORGANIC GRASSLAND 2461

Overseeding with clover

Legume-rich mixture for intensive cutting and grazing

This mixture is especially suitable for overseeding of pastures and undersowing in grain. Because of the high content of perennial ryegrass and white clover it is suitable for grazing and for cutting. The twenty percent of white clover in the mixture ensures nitrogen fixation of the pastures and also good sward density. With regular overseeding, forage quality of pastures is maintained or even improved.

The white clover seeds are treated with DSV's DynaSeed LegumeMaxx, which contains among others species-specific bacteria. DynaSeed LegumeMaxx demonstrably and significantly improves nitrogen fixation, root development, and thus yield.

- ✓ High protein content
- ✓ Suitable for undersowing and overseeding
- ✓ Good sward density

Components

30 %	Lolium perenne (intermediate)	Astonhockey, Euroconquest 
30 %	Lolium perenne (late)	Sherlock, Valerio
20 %	Lolium perenne (early)	Karatos, Mirtello
20 %	Trifolium repens	Bianca, Liflex 

Locations & Usage

Dry	  	Grazing	  
Normal	  	Grazing and cutting	  
Wet	  	Cutting	  
Peat Soil	  	Extensive usage	  
Altitude	  		

+++ = highly suitable| ++ = suitable | + = conditionally suitable| - = not given

Sowing rate: 30 – 40 kg/ha for new sowing, 20 – 25 kg/ha for overseeding,
7 – 10 kg/ha for overseeding several times per year
Sowing time: from Mach to September
Usage per year : 4 – 6
