

Meadow higher altitudes

Grassland mixture especially for the demanding conditions of the uplands

COUNTRY Grassland 2472 is a grassland mixture consisting of varieties recommended in southern Germany for more cultivation security in higher altitudes through winterhardy species. The choice of varieties achieves high performance in yield and forage quality as well as high sward density.

The legumes are treated with DSV's DynaSeed LegumeMaxx, which contains among others species-specific bacteria. DynaSeed LegumeMaxx demonstrably and significantly improves nitrogen fixation, root development, and thus yield.

- ✓ Varieties with special German recommendation for higher altitudes
- ✓ Winterhardy species and varieties
- ✓ High performance in yield and quality

Components

25 %	Lolium perenne (intermediate)	Explosion, Astonhockey
20 %	Lolium perenne (early)	Mirtello
20 %	Lolium perenne (late)	Valerio
20 %	Phleum pratense	Aturo, Presto
5 %	Dactylis glomerata	Rosseur
5 %	Trifolium pratense	Harmonie, Taifun, Milvus 
5 %	Trifolium repens	Bianca, Liflex 

Locations & Usage

Dry	+ +	Peat Soil	+
Normal	+ + +	Altitude	+ + +
Wet	+ + +		

+++ = highly suitable| ++ = suitable | + = conditionally suitable| - = not given

Sowing rate: 35 – 40 kg/ha for new sowing, 20 – 25 kg/ha for overseeding,
7 – 10 kg/ha for overseeding several times per year

Sowing time: from Mach to September

Usage per year: 3 – 4
